Smoke Detector

CareTech's Smoke Detector can be connected to CareTech's various alarm systems to create a reassuring complete solution in individuals' homes or in sheltered accommodation. When the detector is activated it emits a clear audible signal and forwards the alarm to an alarm receiver via CareTech's carephones or the nurse and warden call system.

At CareTech we develop our products and solutions in collaboration with customers and users. CareTech products and know-how offer users, care staff and relatives a reassuring complete solution that gives them extra peace of mind.

Smoke Detector

In contrast to many other smoke detectors the CareTech Smoke Detector uses optical detection instead of an ionization chamber that contains radioactive material. The smoke detector must be installed on the ceiling at the highest point of the room. This is important as smoke reaches the highest point of the room first. If the smoke detector is placed above stairs it must be placed at the highest point of the stairway.

Technical data

Detector	Optical
Battery	9 V
Radio	868.35 MHz
Alarm, acoustic	85 dB
Alarm, radio	Received by CareTech's internal system or carephones
Battery alarm	Checked when testbutton is activated/ acoustic
Dimensions (diam. x h)	123 x 42 mm
For more information	See Technical Manual
Article number	1-12118A

Approval

CE -marked. Complies with relevant standards

Manufactured in accordance with the new RoHS directive, 2002/95/EC

(Restriction of the Use of Certain Hazardous Substances in Electrical and Electronic Equipment)
